Familiar with GRI Standards

Project management

SOFT SKILLS

Strong work ethic & team spirit

Adaptability

Strong decision making

Good time management

Attention to detail

PROFILE

An ESG enthusiast with postgraduate studies in Sustainable Finance and a complete research project of his own. Taking on the role of Sustainability Consultant in your company, I will develop my passion for the consulting industry and deliver a great customer experience to each of your clients by listening to their needs.

PROFESSIONAL EXPERIENCE

• Postgraduate Researcher

University of Ioannina, Ioannina, 10/2016 – 06/2020

I planned and ran my own research project. I studied over 100 papers performing an extensive data analysis. I learned rapidly 4 new techniques through instrumental analysis and applied 2 quantification methods in my experimental routines. I used SPSS Software for a quantitative statistical analysis of my results (chemometrics) and came up with an excellent result, as I managed to find significant differences in terms of "Wonderful" variety (pomegranate juice content), between 5 different geographical areas of Greece, which I characterized. I delivered 1 presentation every week to prove that my experiments were on track discussing emerging drawbacks.

• Laboratory Assistant

University of Ioannina, Ioannina, 02/2017 - 06/2017

I supervised 20 students by providing them with help and guidance in experimental routines and then in solving experimental-based exercises. I was able to increase their final grade by 20% compared to the other groups of students for which other supervisors were responsible. I had an excellent cooperation and communication with the team and got a first sense of leadership, making it a life-changing experience for me.

EDUCATION

- University of Piraeus, Department of Economics, Piraeus, Greece, 2021 - present
